

Parietal Lobe- Removed ability to get tactile informational- “I can’t pick up the utensils and put them in the right place”

Frontal Lobe- High Level Thinking Confuses reasoning ability “Where am I supposed to be?”

Occipital Lobe- Impairs vision and ability to integrate it in the environment - “I can’t see anything. Are these the pants? Where do I put this?”

Temporal Lobe- Audio/Confusion, interference with memory, startle response- “I can’t understand what you just told me. Something about washing my hair.”

Cerebral Cortex - Synthesize information. Anticipatory response.

Limbic System- Synthesize emotion “I give up.”
